

Single Sign-On Infosheet

Edvance360 enables clients to easily connect their internal directories to Edvance360, providing single sign-on (SSO).

Instant On

Edvance360 is entirely cloud based (Software As A Service) and enables clients to connect the LMS to their software systems across the enterprise, sending data securely and conveniently. No software to install, no appliances, no firewall changes, though the latter is advised for higher level security purposes.

Active Directory and LDAP Integration

Edvance360's SSO Active Directory connection is out-of-the-box, requiring no server restarts or firewall changes, no help tickets, and no technical expertise. Input four necessary data fields (IP address, etc.) and you are done! This allows users to sign-in to Edvance360 with the credentials they are already familiar with.

Single Sign-On

Edvance360 SSO uses several options, including LDAP, LTI, OAUTH (to encrypted links), to sign users into Edvance360.

Security & Availability

Edvance360 utilizes QTS data centers (qtsdatacenters.com) complete with world-wide redundant data centers, redundant DNS, DDoS protection, quarterly security reviews by iSEC Partners, 24/7 monitoring, and 99.9% uptime guaranteed.
